[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

# **WEATHER SYNOPSIS BY REGION**

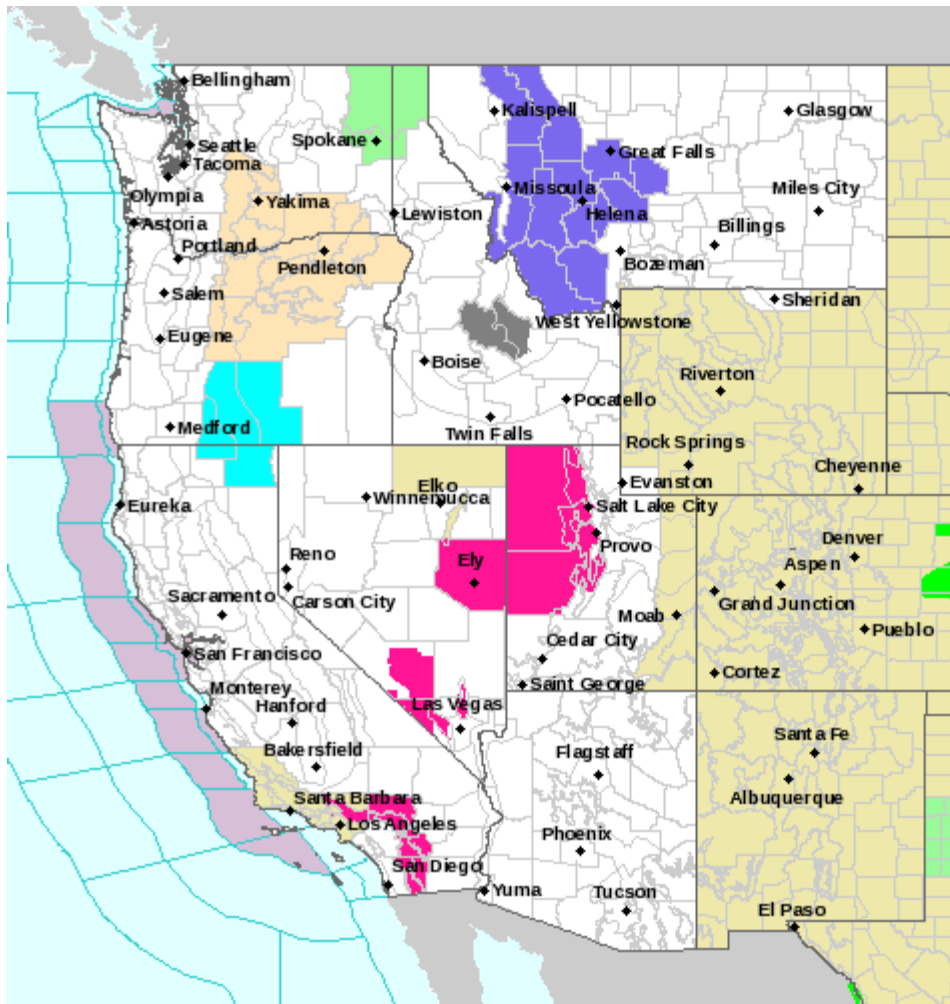

## **NORTHERN CALIFORNIA**

A low pressure trough will be affecting the Northern California region in some form for the next week. Over the next few days it will move slowly inland. Expect skies to be partly cloudy for the next couple days, and there will also be a chance some mountain showers tonight and Sunday morning, mainly in north eastern California. The trough will become centered over the Great Basin early next week and high pressure, well out in the Pacific will begin weakening the trough over Northern California the rest of the week. Dry. Slowly warming weather is expected after Sunday. Temperatures will remain below normal for the next 3 days or so with the warmest afternoon temperatures for the inland valleys around 85-90 degrees. Gradually warming temperatures after that will bring the warmest inland areas back into the mid 90s for the end of next week. Some periods of gusty winds seem likely over the next couple days. Some gusty NW to N winds (gusts locally 25-30 mph) may develop this afternoon over our western and northern areas and linger into the evening hours with some areas also having fairly low RH (10-15%). Overnight RH recovery may be a little higher than it has been, but many inland areas will continue to see mid and upper slopes have moderate recovery of 30-45%, except where any rain falls where it would be much higher.

## **SOUTHERN CALIFORNIA**

Windy and very dry across the mountains and deserts through today. A Pacific trough over the West Coast will bring south to west winds of 15 to 30 mph with gusts to 50 mph to the mountain ridges and desert passes through Sunday evening. This trough will also continue to bring cooling, with temperatures 10 to 15 degrees below average away from the coast this weekend. The marine layer will deepen through this weekend, with morning low clouds and fog making it over the lower coastal mountain slopes by this morning. Minimum humidity will be mainly in the single digits and teens above and inland from the marine layer influence through today and then increase to 12% to 25% Sunday. The Pacific trough will weaken bringing a gradual warming trend to the region early next week. A ridge of high pressure will build into California from the Pacific causing the warming trend to accelerate during the middle to end of next week. Winds will be fairly light across the region next week.
